Executive summary

The show positions **Android XR** as the industry’s first unified platform for extended reality devices, built with Samsung and Qualcomm, and models XR as a spectrum from immersive headsets to lightweight AI Glasses. The substantive announcements split into four blocks: a *Galaxy XR feature drop* (PC Connect, Likeness, travel mode rolling out today; system-level autospatialization next year); a preview of XREAL’s wired-XR Glasses *Project Aura* with optical-see-through lenses and a tethered puck launching next year; prototype AI Glasses built with **Warby Parker** and **Gentle Monster**, launching next year; and **Developer Preview 3 of the Android XR SDK** with new Jetpack libraries — *Glimmer* and *Projected* — plus Gemini Live API support for glasses.

Topics covered

Pre-XR context (00:00–02:40)

Recent Android updates and the universal-assistant framing that motivates Android XR.

- Sameer says the team unveiled an all-new design language, Material 3 Expressive, that launched on Pixel a few months earlier.
- Sameer says Gemini on Android added new screen share and visual guidance capabilities accessible via a long press.
- Sameer references the Nano Banana image editing model in the Gemini app.
- Sameer describes a universal assistant that *gets you, is a step ahead, and handles your busy work*, framed as a fundamental change in how people interact with technology.
- Sameer says the first place this comes together is on the new Android XR platform.

Android XR positioning (02:41–07:00)

What Android XR is, who builds it, and the spectrum of form factors it targets.

- Android XR is the industry's first unified platform for extended reality devices.
- Android XR is built with Samsung and Qualcomm; favorite apps from Google Play are available, along with Gemini as an assistant.
- XR is described as a spectrum of devices, from headsets to glasses.
- Headsets are characterized as powerful devices for shorter, more immersive computing tasks like watching 3D movies, playing games, and getting work done.
- AI Glasses are characterized as lightweight, providing all day wear with quick access to information.
- Devices in the middle blend the two.
- The Samsung Galaxy XR headset is out now.
- AI Glasses are being built in collaboration with Samsung; the first look was earlier in the year at TED and Google I/O.
- Google is partnering with Warby Parker and Gentle Monster to design glasses that are great to wear.
- XREAL's Project Aura is a new form factor that expands the Android XR ecosystem.

Galaxy XR feature drop (07:00–11:42)

The October Galaxy XR launch, the headset's first shipping feature drop, and a sneak peek at autospatialization.

- Galaxy XR launched in October as the first device powered by Android XR, with high-quality resolution, multimodal AI input, and optional controllers.
- The Explorer Pack at launch includes **Google AI Pro**, **YouTube Premium**, and **Google Play Pass**, plus **YouTube TV at \$1 a month for three months** and **NBA League Pass** in the US, or **TVING** and **Coupang Play Sports Pass** in Korea.
- Exclusive Android XR experiences include Doug Liman's film *Asteroid* and Adobe's Project Pulsar for spatial video editing.
- Over 60 made-for-XR apps and games are on the Google Play store one month after launch, including Demeo.
- **PC Connect** pulls a window from a laptop into the headset; Katherine demos City Skylines II streamed from her PC.
- **Likeness** shows a photorealistic version of the user on Google Meet and works across video conferencing apps, not just Google Meet.
- The headset can turn regular 2D content into 3D in real time across multiple apps, and the **autospatialization** feature works with pretty much any app because it runs on the headset.
- The first update rolling out today includes **PC Connect**, **Likeness**, and **travel mode**.
- **System-level autospatialization comes next year.**

Upcoming: Project Aura (11:42–14:42)

XREAL's *Project Aura*, an upcoming wired XR Glasses device on Android XR.

- Project Aura is a lightweight, portable, upcoming device that will bring a new wired XR Glasses experience to the Android XR family.
- The lenses are *optical-see-through* — the user sees the real world through transparent lenses while Project Aura projects virtual experiences into the field of view; users interact with hands, like an Android XR headset.
- Project Aura is powered by a **tethered puck** that holds the main compute and battery and also doubles as a trackpad.
- Aura runs apps from Google Play just like a headset.
- Aura can also be plugged into a laptop to extend its apps as a giant spatial window; Andrea demos using Lightroom this way.

- In a Lightroom demo, Andrea asks Gemini how to add a bokeh effect; Gemini instructs to use the Lens Blur panel, click Apply for AI auto-detect, and use the Blur Amount slider.
- **Project Aura launches next year.**

AI Glasses with Warby Parker and Gentle Monster (14:42–21:52)

The two glasses tiers, remarks from eyewear partners Warby Parker and Gentle Monster, and a prototype-glasses demo.

- Google is working with Warby Parker and Gentle Monster, in collaboration with Samsung, on two tiers.
- **AI Glasses** have built-in speakers, a camera, and microphones for talking with Gemini, listening to music, making calls, and taking photos.
- **Display AI Glasses** add a small display that privately shows helpful information.
- Warby Parker frames glasses as the first thing people see and the only thing many people wear on their face, a powerful form of self-expression.
- Gentle Monster describes itself as a global eyewear brand creating fashion eyewear equipped with AI.
- In a prototype-glasses demo, Gemini identifies a bag of **Ppushu Ppushu Bulgogi Flavor** noodle snack, a popular Korean snack eaten by crushing the noodles and mixing in the seasoning packet.
- Nano Banana is used to take a group photo and add an Android bot with a full body and sunglasses.
- Gemini identifies edamame on the snack table as a high-protein option.
- **Live Translate** is demoed with Jin from Samsung speaking Korean.
- A pair of glasses was given to **GetYourGuide** for travel use cases; Rose demos the glasses on the East Village Sandwich Tour, asking Google for nearby food tours and saving spots.

Developer updates (21:52–28:00)

Android XR SDK Developer Preview 3 changes, new Jetpack libraries for glasses, and an Uber-on-glasses demo.

- **Android XR SDK Developer Preview 3** is announced.
- New features for headsets include spatial animations with **soft head locking** and transitions, and Material 3 components like

dialogs and navigation bars that automatically transform into spatial XR elements.

- New APIs let apps detect a device's field of view; developers can test fields of view in the **XR Emulator in Android Studio**.
- **Development opens today for both AI Glasses and Display AI Glasses.**
- ARCore for Jetpack XR adds **geospatial capabilities**: the **Visual Positioning Service** provides directions based on orientation, the **Geospatial API** enables content triggers and location-specific actions, and ARCore motion tracking enables responses to user movement like a head tilt.
- **Jetpack Glimmer** is a Compose UI Toolkit for AI Glasses with components like cards, lists, and stacks, designed for transparent displays.
- **Jetpack Projected Library** lets developers bring an existing Android mobile app directly to AI Glasses and manage audio configurations and the glasses camera from a core mobile app.
- The team collaborated with the **Firebase AI Logic team** to make the **Gemini Live API** work with AI Glasses.
- Amit, who leads the rider-product team at Uber, demos Uber on glasses: after booking, the rider sees **trip status and ETA in view**; at the airport, **wayfinding** provides simple contextual directions; at the pickup curb, the glasses show the **driver's license-plate number** and can help call the driver.

Numbers and data points

Value	Context
October	Month Galaxy XR launched
\$1 a month for three months	YouTube TV pricing in the Explorer Pack
over 60	made-for-XR apps and games on Google Play one month after launch
Developer Preview 3	Android XR SDK release announced today
70-degree field of view	Project Aura wired XR Glasses field of view
next year	When system-level autospatialization arrives
next year	When Project Aura launches
next year	When AI Glasses with Warby Parker and Gentle Monster launch

Notable quotes

Android XR is the industry’s first unified platform for extended reality devices. — Shahram

We see XR as a spectrum of devices, from headsets to glasses. — Kihwan

Yes, our AI Glasses are eyewear first. — Kihwan

In October, we launched Galaxy XR, the first device to be powered by Android XR, giving you access to Gemini. — Austin

Just one month after launch, there are now over 60 made for XR apps and games on the Google Play store, — Katherine

System-level autospatialization comes next year. — Katherine

It's powered by a tethered puck, which holds the main compute and battery. — Juston

Aura runs apps from Google Play just like a headset. — Andrea Colaco

There's AI Glasses that have built-in speakers, a camera, — Juston

Glasses are the first thing that somebody sees. — Neil

Gentle Monster is a global eyewear brand — Isaac

That's a bag of Ppushu Ppushu Bulgogi Flavor — Gemini

If you're developing for Android, you're already developing for XR. — Matthew

Today, we're announcing Developer Preview 3 of the Android XR SDK. — Matthew

We're bringing the Uber experience to glasses with Android XR, — Amit
